HTTP

METHODS

COMMENT

GET

- **Purpose:** Retrieves data from a server.
- **Example:**

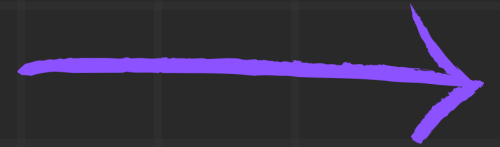

<https://api.example.com/users/1>

Retrieves the user with ID 1.

POST

- **Purpose:** Submits data to a server, often used for creating new resources or performing actions.
- **Example:**
<https://api.example.com/users>
Creates a new user with the provided data.

PUT

- **Purpose:** Updates a resource on a server.
- **Example:**

<https://api.example.com/users/1>

Updates the user with ID 1 using the provided data.

DELETE

- **Purpose:** Removes a resource from a server.
- **Example:**

<https://api.example.com/users/1>

Deletes the user with ID 1.

PATCH

- **Purpose:** Applies partial updates to a resource on a server.
- **Example:**
<https://api.example.com/users/1>
Updates only the email field of the user with ID 1.

HEAD

- **Purpose:** Retrieves the HTTP headers of a resource without the body.
- **Example:**
<https://api.example.com/users/1>
Gets the headers of the user with ID 1.

OPTION

- **Purpose:** Returns information about the supported HTTP methods and headers for a resource.

- **Example:**

<https://api.example.com/users/1>

Gets information about the allowed methods for the user with ID 1.

TRACE

- **Purpose:** Echoes the request back to the client for debugging purposes.
- **Example:**
<https://api.example.com/users/1>
Sends the request back to the client for inspection.
